

SWALLOW DENTAL SUPPLIES

Swallow Dental Supplies offer an ever-expanding product range designed to meet the surgical and hygienic requirements of their customers.

INTRODUCTION

Founded in 1998, Swallow Dental Supplies has established itself as leading experts within their industry. They offer an ever-expanding product range designed to meet the surgical and hygienic requirements of their customers. Initially launched as a one-person operation in October 1988, the company has since expanded to include a 25-member team of employees, proving themselves as a company with high goals and ambitions. Whether it's bone augmentation materials or cutting-edge PDT hand instruments, Swallow's commitment to their customers is unbeatable within their field. Their team of experts have a dedication to innovation and make it their mission to listen to each customer to make their working lives easier.

SUMMARY

PROJECT

Just like many businesses in today's business world, Swallow Dental were incredibly worried about their online security.

SOLUTION

Our team implemented a range of services, such as LastPass, Microsoft Intune, etc. to enhance their security.

CHALLENGE

Just like many businesses in today's business world, Swallow Dental were incredibly worried about their online security. In the business world where each day comes with increasing digital threat and vulnerabilities, they had growing concerns about the need to protect their sensitive business data and important financial information. Swallow Dental's growing concerns, led them in getting touch with us to help them secure their business. After an in-depth consultation with our experts about their needs and requirements, we offered a couple solutions to fortify their digital security.

SOLUTION

LastPass:

One of the solutions we provided was LastPass, a robust password manager that helps businesses centralise their password storage. This is crucial as passwords are usually the first line of defence when it comes to protecting businesses from cyber-attacks and data breaches. This was incredibly useful for Swallow as they would face the challenge of managing and tracking their wide range of different passwords and credentials. This enabled Swallow Dental to consolidate their passwords into one central hub allowing secure sharing across the organisation. It also helped boost their digital security due to the unique security features LastPass provides. To ensure an efficient implementation, we used the Active Directory Sync and Group Policy to allow LastPass Add-In to be on the web browser by default. This helped us effectively ensure that all user devices had it installed so all users could start using LastPass as soon as possible.

Microsoft Intune:

A significant number of Swallow Dental's staff had Microsoft applications installed onto their mobile devices to ensure they could work from anywhere and stay updated with the business. However, having these apps on their phone provides another entry point for cyber criminals to obtain their sensitive data. Which is why we also offered Swallow with Microsoft Intune which is a cloud-based service and mobile device management (MDM) solution which combines productivity with business protection. Intune applies security on all their employee's accounts, regardless of what device they're working on. It also manages how devices can be used and control what content users and devices have access to. MS Intune also includes endpoint security.

➤ **Better Control Over Their Data**

Through the deployment of LastPass and Microsoft Intune allowed Swallow to gain better control over their data. Additionally, the network transformation optimised their data infrastructure for improved efficiency and reliability.

➤ **Improved Peace of Mind**

Our approach to enhancing their security measures helped increase their peace of mind. Knowing their sensitive business data and financial information were well-protected allows their team to focus on other aspects of their business.

➤ **Enhanced Security**

With the help of our suggestions and the services we offered, Swallow Dental Supplies were able to significantly improve their digital security. Implementing LastPass and Microsoft Intune and the security features they offer added an extra layer of protection to their business.
